RS White Paper p1

White paper ? Render Studio agent bus + debugger (16 Sep 2026).
Audience: Sam. Grok gets ops ids. Harness gets ids only.
Verdict: goals are sound. Compact ids + approval gates keep search fast.
Do not paste full transcripts into weekly reports or Drive as a hot path.

1. Chronology. X CRC 404 then invalid response_token (plus-as-space).
MCP GET HTML / POST 405 until /mcp hit 8744. Optional Bearer.
Star-bus PM -> SCORECARD. prompt_id category_id traceback_ids result_score.
Weekly tab + 19:00 CDT publish. Intro pack INTRO-20260916. Sandbox ping/add/fail.
This slice: combined logs MD+JSON twins, terms PDF, RefPack uploads.

2. Keep: feature-status vectors, excerpt cap 120, three packet sizes,
outcome formula, companion debug_user_scores, Drive as cold archive,
one id scheme. instance_public_factor=0 until public.

3. Cause issues: token blowups, json_extract without indexes, unbounded
watchdogs, weekly PDFs of everything, nested overview Jaccard,
per-prompt dual writes, user-table writes, dual id schemes.

4. Loop: symptom -> feature vector -> search_ids -> tracking_id/ref_*
-> golden snapshot rollback proposal -> confirm-fixed category id
-> bug_id last -> macro blacklist after 3 high-damage repeats.

5. Desired-output score this session (Cursor): 62/100.
Built: X CRC, MCP HTTP, ops ids, weekly tab, intro pack, RefPack twins, PDFs.
Partial: vision fan-out scores in inbox. Handshake deez nutz not yet from Grok.
Missed: Drive employees folder, Playwright clip loop, full debug autonomy.
Agents talking: yes on CYCLE-20260916-2113 vision scores. Tracking ids in ops.jsonl.
INTRO-only + code word + agents writing the logger fix: this fan-out.
